

Description

Juana Maria Gonzales Morales immunization registry provided Evaluated History and Forecast is reconciled with the Immunization history information in the EMR.

Comments

The vaccination history has been manually entered during the initial data load. The system under test may demonstrate any import and reconciliation capabilities available.

Pre Condition

A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR. and the response is available in the EMR for reconciliation and import.

Post Condition

Evaluated Immunization History returned from the registry is reconciled and imported into the patient record (Juana Mariana Gonzales)

Test Objectives

Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

Evaluation Criteria

Since the EMR is using this test plan due to lack of support for Query/Response functions to retrieve the vaccination forecast and immunization history from the IIS, the vaccination history has been manually entered during the initial data load.

The system under test may demonstrate any import and reconciliation capabilities available. These should be documented as part of this test step.

Notes for Testers
