

Description

A patient is seen at a clinic. A new administration is recorded. The IIS is able to process the administration message but finds a soft error (warning) which it returns in the acknowledgement message.

Comments

The test case simulates the IIS issuing an acknowledgement warning due to an internal warning even though the message is valid.

Pre Condition

No PreCondition

Post Condition

The returned warning must be visible in the EHR-S.

Test Objectives

The test case targets the EHR-S capability of supporting OIDs (e.g., in MSH-3 and for assigning authorities) for administered message and assesses the ability of the EHR-S to accept an acknowledgement message with a soft error (warning) being returned by the IIS.

Evaluation Criteria

Administered Message: Validation Report with no Errors

Acknowledgement Message: An indication of a warning (See Juror Document)

Notes for Testers

No Note
