

Description

Following the vaccinations given during the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The Vaccination report includes all newly administered vaccines, and an indication that Varicella was not administered due to a history of the disease as evidence of immunity. The Vaccination report also includes an indication that Hepatitis A was not administered due to serological evidence of immunity. The report MAY send the immunizations that the EMR imported from the IIS.

Comments

The Report must include all newly administered vaccines in any order. The report may include the information imported from the IIS.

Pre-condition

The vaccines for the visit have been administered. The clinical information has been documented for Juan Marcel Marina in the Initial Data Load.

Post-Condition

The Immunization Report has been transmitted to the IIS using a valid Z22 VXU in accordance with the test data correctly and without omission.

Test Objectives

Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries. The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.

Link Standard Codes to Immunization Data: The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization.
a. NDC codes, CVX for immunizations

Evaluation Criteria

The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.

This includes indication that Varicella was not administered due to history of the disease, and an indication that Hepatitis A was not administered due to serological evidence of immunity.

Notes

This message has been updated in the 2018 release to indicate that no Varicella vaccine was administered due to a history of the illness as evidence of immunity.

This message has also been updated in the 2018 release to indicate that no Hepatitis A vaccine was administered due to

serological evidence of immunity.

These are not subject to the 90% rule in this introductory year.

Tester should document any issues with these new evaluation stage test features.
