

Description

If the EHR does not already flag the first MMR as invalid, the provider updates the first MMR to indicate it is "invalid" as it was given too early (as notified by the registry)

Comments

If the EMR already recognizes the dose as invalid, then this step may be skipped.

Pre Condition

Initial Data Load -

Step 2: Enter Initial Immunization Data for Juana Mariana Gonzales: Immunizations from practice

Post Condition

MMR status for the first MMR dose is set to invalid.

Test Objectives

dose validity is an important aspect of:

Record Past Immunizations: The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.

Evaluation Criteria

Evaluation Criteria: The vendor is able to record that the first MMR vaccination dose is invalid with a reason that it was given too early, and therefore the dose administered on 11/22/2012 should indicate dose '1', and the dose administered two weeks prior to the current visit should indicate dose '2'.
