

**Description**

A male child patient, Bobbie Q. Child, is brought to the clinic for an annual visit. A staff person locates his medical record in the EHR-S. The staff person confirms demographic information, including address. The staff person triggers a request to the IIS for an evaluated history and forecast for the child. The IIS performs a search for Bobbie Q. Child and finds one high-confidence match. The IIS generates an evaluated history and forecast for Bobbie and returns this to the EHR-S. One dose of vaccine was not administrated at the correct age and is marked as not valid. The EHR-S displays the evaluated history and forecast, including the not valid dose.

**Comments**

No Comments

**Pre Condition**

Person exists in the system with the complete demographics as provided in the Test Data Specification.

Person has Medical Record Number (MR).

Person does have an immunization history in the IIS,

**Post Condition**

The clinician is able to view the evaluated history and forecast from the IIS (even if temporal).

**Test Objectives**

Evaluates EHR-S ability to create a well formed query for a child. Evaluates EHR-S ability to accept a response with evaluated history and forecast for that person.

**Evaluation Criteria**

Query: Message Validation Report

Response: Juror Document

**Notes for Testers**
