

**Description**

A patient is seen at a clinic. A new administration is recorded. The IIS is able to process the administration message but finds multiple soft errors (warnings) which it returns in the acknowledgement message.

**Comments**

The test case simulates the IIS issuing an acknowledgement warning due to an internal warning even though the message is valid.

**Pre Condition**

No PreCondition

**Post Condition**

The returned warnings must be visible in the EHR.

**Test Objectives**

This test case assesses the ability of the EHR to accept an acknowledgement message with multiple soft errors (warnings) being returned by the IIS.

**Evaluation Criteria**

Administered Message: Validation Report with no Errors

Acknowledgement Message: An indication of warnings (See Juror Document)

**Notes for Testers**

No Note
