

### Description

If the EHR does not already flag the first MMRV as invalid, the provider updates the first MMRV to indicate it is “invalid” as it was given too early (as notified by the registry)

### Comments

If the EMR already recognizes the dose as invalid, then this step may be skipped.

### PreCondition

MMRV status indicates that the first MMRV dose is valid.

### PostCondition

MMRV status for the first MMRV dose administered on 10/23/2010 is set to invalid.

### Test Objectives

dose validity is an important aspect of:

*Record Past Immunizations:* The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.

### Evaluation Criteria

Vendor is able to record that the vaccination dose is invalid with a reason that it was given too early

### Notes to Testers

No Note
