# Quick Test Case Reference Guide ONC 2015 Test Plan

### **Test Case Group: Administration Group**

The administration group is design to test:

- (1) the creation of a broad scope of immunization messages including support for new and historical administrations, refusals, combination vaccines, patient consent and various observations including VIS and VFC.
- (2) the receipt and handling of various acknowledgement messages including application accept, application error, and application warning.

Test Cases consists of 2 steps:

- (1) creating immunization messages based on the Immunization Messaging Standard (Z22 Profile) and specific Test Data, and
- (2) receiving acknowledgment messages based on the Immunization Messaging Standard (Z23 Profile).

Test Case	IZ-AD-1_Admin_Chlid
Description:  A child (infant) is seen at a clinic. Historical vaccinations are recorded and new vaccines are	
administered and docum	
	Test Steps
	Description:
IZ-AD- 1.1_Send_V04_Z22	A two month old male infant, Russell Clinton Richardson, is brought to a clinic for a well child visit by his mother Maria Elizabeth Richardson (nee Billington) and his father John William Richardson. A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider, Wilma Thomas (physician ID 654) reviews the patient's vaccination history and determines that the child previously received Hepatitis B vaccine 1 day after birth and 1 month after birth. The staff member determines that the patient needs DTaP, Hib, IPV, Rotavirus and Pneumococcal vaccinations. Because of the patient's status of Native American, he qualifies for all Vaccine For Children (VFC) supplied vaccines under the status of VFC eligible - American Indian/Alaska Native. The parents are given 5 Vaccine Information Sheets (VIS) to review. After reading them, they agree that the child should receive all the vaccinations recommended. They also agree that the data should be shared once it is incorporated into the local IIS. Appropriate doses of DTaP/Hib/IPV (Pentacel), Rotavirus (RotaTeq) and Pneumococcal (Prevnar 13) are selected from the clinic's stock of publically funded vaccines. A clinician, Lily Jackson (ID 7824) prepares and administers the doses to the patient and then enters the data into the EHR and transmits it to the IIS.

	Test Objectives:	
	No Test Objectives	
IZ-AD- 1.2_Receive_ACK_Z23	Test Objectives:	
	No Test Objectives	II

Test Case	IZ-AD-2_Admin_Adult
Description:  An adult is seen at a clinic. Historical vaccinations are recorded and new vaccines are administered and documented.	
	Test Steps
IZ-AD- 2.1_Send_V04_Z22	Description:  A 32 year old female, Elise Wong, visits a clinic for a well woman visit. A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider, Wilma Thomas (physician ID 654) reviews the patient's vaccination history and determines that Elise has received her influenza vaccinations on 10/12/2014 and 11/12/2013, but is in need of a tetanus booster. Because of the patient's age she does not qualify for Vaccine For Children (VFC) supplied vaccine. Elise is given the appropriate Vaccine Information Sheet (VIS) to review. After reading it, she agrees to receive the recommended vaccination. She also agrees that the data should be shared once it is incorporated into the local IIS. An appropriate dose of Tdap (TENIVAC) is selected from the clinic's stock of privately funded vaccines. A clinician, Lily Jackson (ID 7824) prepares and administers the doses to the patient and then enters the data into the EHR and transmits it to the IIS.  Test Objectives:
IZ-AD- 2.2_Receive_ACK_Z23	Description:  The IIS returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.  Test Objectives:

Test Case	IZ-AD-3_No_Consent
Description:	

A child is seen at a clinic. A new vaccine is administered and documented but the information is not to shared by the IIS.

	Test Steps	
IZ-AD- 3.1_Send_V04_Z22	Description:  An eleven and a half year old female, Katherine Mackenzie Benton, is brought to a clinic for a third and final dose of HPV vaccine. She is accompanied by her mother Kari Michelle Benton (nee Jones). A clinic staff member collects basic patient demographic information including name, date of birth and sex. The mother is given the appropriate Vaccine Information Sheet (VIS) to review. After reading it, the mother agrees that the child should receive the HPV vaccine, but she chooses not to share the data once it is incorporated into the local IIS. A clinic provider, Wilma Thomas (physician ID 654) places an order for the vaccination. While the patient is covered by insurance, the plan does not cover this vaccination and she qualifies for Vaccine For Children (VFC) supplied vaccines under the status of VFC eligible - Underinsured. An appropriate dose of HPV (CERVARIX) is selected from the clinic's stock of publically funded vaccines. A clinician, Lily Jackson (ID 7824) prepares and administers the dose to the patient and then enters the data into the EHR and transmits it to the IIS.  Test Objectives:  Support for no consent given Support for a full middle name	
IZ-AD- 3.2_Receive_ACK_Z23	Description: The IIS returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.  Test Objectives:	

Test Case	IZ-AD-4_Delete_Record
Description:	
A child is seen at a clinic	. A previously documented vaccination is deleted due to user error.
	Test Steps
IZ-AD- 4.1_Send_V04_Z22	Description:  After administering an HPV vaccination to the eleven and a half year old female Katherine Benton the clinician, Lily Jackson (ID 7824) realizes that the vaccination was documented on the incorrect patient chart. She deletes the vaccination from the patient chart and transmits the change to the IIS.  Test Objectives:  Support for sending delete requests.
IZ-AD- 4.2_Receive_ACK_Z23	Description:  The IIS returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Test Obje	tives:
-----------	--------

T + C	
Test Case	IZ-AD-5_Refusal
Description:	
The second child of a se additional one is refused	t of twins is seen at a clinic. A new vaccinations are administered but an by the parents.
	Test Steps
IZ-AD- 5.1_Send_V04_Z22	Description:  A 1 year old male, Tyler Owen Banks, is brought to a clinic for a well child visit. He is accompanied by his father Karl Leonard Banks. Tyler's twin brother, born 5 minutes before Tyler, was not able to make it to the clinic. A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider, Joe Smith (physician ID 123) reviews the patient's vaccination history and determines that the child requires Hib, Hep A, MMR and Varicella vaccinations. The child is covered by insurance and does not qualify for all Vaccine For Children (VFC) supplied vaccines. The father is given the appropriate Vaccine Information Sheets (VIS) to review. After reading them, the father agrees that the child should receive the Hib, Hep A and MMR vaccines but refuses the Varicella vaccine. He also
	agrees that the data should be shared once it is incorporated into the local IIS. Appropriate doses of Hib (HIBERIX), Hep A (VAQTA) and MMR (M-M-R II) are selected from the clinic's stock of privately funded vaccines. A clinician, Lily Jackson (ID 456) prepares and administers the doses to the patient and then enters the data into the EHR and transmits it to the IIS.  Test Objectives:
IZ-AD-	Description:  The IIS returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

5.2\_Recieve\_ACK\_Z23 were found during the course of filing the message.

#### **Test Objectives:**

Test Case	IZ-AD-6_Update_Record
Description:	
A child is seen at a clinic information	A previously documented vaccination is updated to correct inaccurate
	Test Steps
	<b>Description:</b> After document vaccinations for Tyler Owen Banks the clinician, Lily Jackson

IZ-AD- 6.1_Send_V04_Z22	(ID 456) recognizes that an error was made during data entry for the Hepatitis A vaccine. The Lot Number was entered incorrectly. She updates the data in the EHR and transmits it to the IIS.
	Test Objectives:
	Support for sending an update request.
IZ-AD- 6.2_Receive_ACK_Z23	Description:  The IIS returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.  Test Objectives:

Test Case	IZ-AD-7_Historical_IIS-Error
Description:	
<del>*</del>	ic. A historical vaccination is recorded but the IIS is unable to process the rejects it and returns a fatal error in the acknowledgement message.
	Test Steps
	Description:  A 66 year old female, Helen Barrett, comes to a clinic for a physical. A clinic
IZ-AD- 7.1_Send_V04_Z22	staff member collects basic patient demographic information including name, date of birth and sex. The patient reports that she received a Zoster vaccination at a local pharmacy on her 65th birthday. The clinic staff determine that no further vaccinations are required. A clinician, Lily Jackson (ID 7824) enters the historical data into the EHR and transmits it to the IIS.
	Test Objectives:  Support for Sending Responsible Organization (MSH-22) and Receiving Responsible Organization (MSH-23).
IZ-AD- 7.2_Receive_ACK_Z23	Description:  The IIS has a mapping error in their CVX table and is unable to recognize the CVX code sent in RXA-5 even though it is valid. The IIS is unable to identify the appropriate vaccine, which is a required element, and rejects the message. The acknowledgement message returned contains errors for the table mapping, missing required field (RXA-5) and missing required segment (RXA).  Test Objectives:

Test Case	IZ-AD-8_Admin_IIS-Warning
Description:	
Description:	

A patient is seen at a clinic. A new administration is recorded. The IIS is able to process the administration message but finds a soft error (warning) which it returns in the acknowledgement message.

#### **Test Steps**

#### **Description:**

IZ-AD-8.1 Send V04 Z22

A 1 month old female, Ashley Jennifer Broadbent, is brought to a clinic for a well child visit by her mother Ellen Broadbent (nee Layton). A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider, Wilma Thomas (physician ID 654) reviews the patient's vaccination history and determines that the child requires a Hep B vaccination. The child is covered by insurance and does not qualify for all Vaccine For Children (VFC) supplied vaccines. The mother is given the Vaccine Information Sheet (VIS) to review. After reading it, she agrees that the child should receive the Hep B vaccine. She also agrees that the data should be shared once it is incorporated into the local IIS. An appropriate dose of Hep B (ENGERIX-B) is selected from the clinic's stock of privately funded vaccines. A clinician, Lily Jackson (ID 7824) prepares and administers the doses to the patient and enters the data into the EHR and transmits it to the IIS.

#### **Test Objectives:**

Support of OIDs.

## IZ-AD-

#### **Description:**

A mapping error in the IIS software results in the IIS being unable to recognize the administration site sent in RXR-2 even though it is valid. The **8.2 Receive ACK Z23** acknowledgement message returned contains a warning for an invalid value.

#### **Test Objectives:**

#### **Test Case**

#### IZ-AD-9 Admin IIS-2Warnings

#### **Description:**

A patient is seen at a clinic. A new administration is recorded. The IIS is able to process the administration message but finds multiple soft errors (warnings) which it returns in the acknowledgement message.

#### **Test Steps**

#### **Description:**

A 4 year old female, Lacy Wells, is brought to a clinic for a well child visit by her guardian Janelle Trudeau. A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider, Wilma Thomas (physician ID 654) reviews the patient's vaccination history and determines that the child requires DTaP, polio, MMR and varicella vaccinations. The child is covered by insurance and does not qualify for all Vaccine For Children (VFC) supplied vaccines. The guardian is given the appropriate Vaccine Information Sheet (VIS) to review. After reading it, she agrees that the child should receive all the vaccines. She also agrees that the

IZ-AD-9.1 Send V04 Z22

	data should be shared once it is incorporated into the local IIS. Appropriate doses of DTap-IPV (KINRIX) and MMRV (ProQuad) are selected from the clinic's stock of privately funded vaccines. A clinician, Lily Jackson (ID 7824) prepares and administers the doses to the patient and enters the data into the EHR and transmits it to the IIS.  Test Objectives:
IZ-AD- 9.2_Receive_ACK_Z23	Description:  A mapping error in the IIS software results in the IIS being unable to recognize either administration site sent in RXR-2 even though it is valid. The acknowledgement message returned contains warnings for the invalid values.  Test Objectives:  Handling of an ACK message returned by the IIS with multiple warnings.

Test Case	IZ-AD-10_Historical_IIS-SysError	
Description:  A patient is seen at a clinic. A historical vaccination is recorded but the IIS is unable to process the administration message, rejects it and returns a fatal error in the acknowledgement message.		
	Test Steps	
IZ-AD- 10.1_Send_V04_Z22	Description:  A 68 year old male, Manuel Diego Vasquez, comes to a clinic for a physical. A clinic staff member collects basic patient demographic information including name, date of birth and sex. The patient reports that he received a pneumococcal vaccination at a local pharmacy on October 21, 2014. The clinic staff determine that no further vaccinations are required. A clinician, Lily Jackson (ID 7824) enters the historical data into the EHR and transmits it to the IIS.  Test Objectives:	
IZ-AD- 10.2_Receive_ACK_Z23	Due to an error in the IIS software, the IIS is unable to recognize the HL7 version ID sent in MSH-12 even though it is valid. The acknowledgement message returned contains an error for an unsupported version ID.  Test Objectives:	

## **Test Case Group: Evaluated History and Forecast Group**

#### Test the EHR-S capability to:

This set of tests evaluates the EHR-S's ability to create well-formed queries and gracefully accept the response messages. It evaluates that the clinician is shown the results of the query. The possibilities include: (1) evaluated history and forecast (2) too many patients found, or (3) no patients found. A juror document (inspection check list) is provided that indicates the content that is expected to be displayed.

#### **Test Cases consists of 2 steps:**

**Test Case** 

- (1) create query messages based on Immunization Messaging Standard (Z44 Profile) and specific Test Data, and
- (2) receive (Z42 Profile) messages and display evaluated history and forecast OR receive (Z33 Profile) and display too many patients found or no patients found.

**IZ-QR-1 Query Child** 

<b>Description:</b> A male child patient, Bobbie Q. Child, is brought to the clinic for an annual visit. A staff person locates		
his medical record in the EHR-S. The staff person confirms demographic information, including address. The staff person triggers a request to the IIS for an evaluated history and forecast for the child. The IIS performs a search for Bobbie Q. Child and finds one high-confidence match. The IIS generates an		
evaluated history and forecast for Bobbie and returns this to the EHR-S. One dose of vaccine was not administrated at the correct age and is marked as not valid. The EHR-S displays the evaluated history and forecast, including the not valid dose.		
	Test Steps	
	Description:	
IZ-QR- 1.1_Query_Q11_Z44	A male child patient, Bobbie Q. Child, is brought to the clinic for an annual visit. A staff person locates his medical record in the EHR-S. The staff person confirms demographic information, including address. The Staff person triggers a request to the IIS for an evaluated history and forecast for the child.	
	Test Objectives:  Test the ability of the system to successfully create a query message based on the given test data.	
	Description:	
IZ-QR- 1.2_Response_K11_Z42	The IIS performs a search for Bobbie Q. Child and finds one high-confidence match. The IIS generates an evaluated history and forecast for Bobbie and returns this to the EHR-S. One dose of vaccine was not administrated at the correct age and is marked as not valid. The EHR-S displays the evaluated history and forecast, including the not valid dose.	
	Test Objectives:	
	Receive a response message containing the evaluated history and forecast; display evaluated history and forecast.	

Test Case	IZ-QR-2_Query_Adult
Description:	

Query for an adult using the most significant query parameters. The patient is found in the IIS. A response message is returned with a single immunization event and multiple immunization recommendations.

An adult male patient, Stanley S. Clement presents to the clinic, seeking an immunization for influenza. A clinic staff member locates his medical record in the electronic health record system. The staff member sees that he has previously had an immunization against influenza. The staff member triggers a request to the IIS to request an evaluated history and forecast for the patient. The IIS performs a search for Stanley S. Clement and finds one high confidence match. The IIS generates an evaluated history and forecast for Mr. Clement and returns this to the EHR-S. The EHR-S displays the evaluated history and forecast to the staff member.

Test Steps	
IZ-QR- 2.1_Query_Q11_Z44	Description:  An adult male patient, Stanley S. Clement presents to the clinic, seeking an immunization for influenza. A clinic staff member locates his medical record in the electronic health record system. The staff member sees that he has previously had an immunization against influenza. The staff member triggers a request to the IIS to request an evaluated history and forecast for the patient.  Test Objectives:  Test the ability of the system to successfully create a query message based on the given test data.
IZ-QR- 2.2_Response_K11_Z42	Description:  The IIS performs a search for Stanley S. Clement and finds one high confidence match. The IIS generates an evaluated history and forecast for Mr. Clement and returns this to the EHR-S. The EHR-S displays the evaluated history and forecast to the staff member.  Test Objectives:  Demonstrate the capability to receive a response message containing the evaluated history and forecast; display evaluated history and forecast.

Description:
A female toddler, Donna Victoria Bee, is brought to the local clinic to determine what immunizations have been given and what immunizations are needed. A clinic staff member collects basic patient
demographic information including name, date of birth, sex, and birth order (Donna was born 3rd in a
triplet). A clinic provider uses this information to locate the patient's medical record. The staff member
then uses the medical record and system capabilities to query the IIS to request an evaluated history and

**IZ-QR-3 Query No Patients** 

**Test Case** 

forecast for the patient.

The IIS performs a search for Donna Victoria Bee and does not find a high-confidence match. The IIS returns a response message indicating no person found to the querying system. It is expected that the requesting system (e.g., EHR-S) process the response message and display some indication to the end user that no matches were found.

Test Steps	
	Description:

IZ-QR- 3.1_Query_Q11_Z44	A female toddler, Donna Victoria Bee, is brought to the local clinic to determine what immunizations have been given and what immunizations are needed. A clinic staff member collects basic patient demographic information including name, date of birth, sex, and birth order (Donna was born 3rd in a triplet). A clinic provider uses this information to locate the patient's medical record. The staff member then uses the medical record and system capabilities to query the IIS to request an evaluated history and forecast for the patient.  Test Objectives:  Tests for a maximally valued query message, including use of OIDs, mother's maiden name, fully valued address, birth indicator and birth order.
IZ-QR- 3.2_Response_NF_K11_Z33	Description:  The IIS performs a search for Donna Victoria Bee and does not find a high-confidence match. The IIS returns a response message indicating no person found to the querying system.  Test Objectives:  Test the capability of the EHR-S to process a response message that returns no persons found and to provide an indication to the end user.

Test Case	IZ-QR-4_Query_Too_Many
-----------	------------------------

#### Description:

A child, James Smith, is brought to the local clinic to determine what immunizations have been given and what immunizations are needed. A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider uses this information to locate the patient's medical record. The staff member then uses the medical record and system capabilities to query the IIS to request an evaluated history and forecast for the patient.

The IIS performs a search for James Smith and finds too many matches. The IIS returns a response message indicating no person found (too many matches) to the querying system. It is expected that the requesting system (e.g., EHR-S) process the response message and display some indication to the end user that the person was not found (too many matches).

Test Steps	
IZ-QR-4.1_Query_Q11_Z44	Description:  A child, James Smith, is brought to the local clinic to determine what immunizations have been given and what immunizations are needed. A clinic staff member collects basic patient demographic information including name, date of birth and sex. A clinic provider uses this information to locate the patient's medical record. The staff member then uses the medical record and system capabilities to query the IIS to request an evaluated history and forecast for the patient.  Test Objectives:  Tests for a typically valued query message.

IZ-QR- 4.2_Response_TM_K11_Z33	The II based responding querying process that the
	Test (
	T4 41

#### Description:

The IIS performs a search for James Smith and finds too many matches based on the sending system's query (e.g., EHR-S). The IIS returns a response message indicating no person found (too many matches) to the querying system. It is expected that the requesting system (e.g., EHR-S) process the response message and display some indication to the end user that the person was not found (too many matches).

#### **Test Objectives:**

Test the capability of the EHR-S to process a response message that returns no persons found (too many matches) and to provide an indication to the end user.
