Test Plan Summary

CDC Immunization Related Requirements Test Plan (CNI) v3

Test Case Group: Initial Data Load

The initial Data load will consist of the vendor entering data during live interactive testing for 4 patients with various scenarios. The data entry will include demographic data, Immunization histories and specific conditions for each patient.

Test Case

Juana Mariana Gonzales Initial Data Load

Description:

The practice site for the scenario is Shoreline Pediatrics. The EHR vendor loads demographic data and clinical history for Juana Mariana Gonzales. The data includes immunizations provided by the practice.

The vendor also enters:

Two vaccines administered at other sites

o an influenza vaccine given at a local pharmacy

o an inactivated polio vaccine given elsewhere and not reported to the registry - the history includes an adverse reaction (febrile seizure) 8 hours after the vaccine was administered

Adverse reaction to inactivated polio vaccine (febrile seizure) and the date and source of information

A lergy to egg albumin administered at this site (the registry has different CVX date and lot number information for this vaccine)

NOTE: the historical vaccines will be imported during the Registry query (e.g. from another practice)

Test Steps

Description:

The EHR vendor loads demographic data for Juana Mariana Gonzales.

Enter Initial Demographic Data for New Patient Juana Mariana Gonzales, 6year old

Test Objectives:

Register New Patients: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's

	information to external systems such as an immunization registry.
Immunization Data for Juana Mariana Gonzales: Immunizations from practice	Description: The EHR vendor loads immunization history data from the local practice for Juana Mariana Gonzales.
	Test Objectives: *Record Past Immunizations: The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.
Dandin	Description: The EHR vendor loads immunization history data from another practice into the record for Juana Mariana Gonzales.
	Test Objectives: Record Past Immunizations: The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.
Enter Initial Immunization Data for Juana Mariana Gonzales Reported by Parent	Description: The provider enters immunization data from a pharmacy as reported by the parent for Juana Mariana Gonzales. Test Objectives: Record Past Immunizations: The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.
Enter Adverse Reaction to the Polio Vaccine	

Description:

The provider documents in the EMR the clinical history of an allergy to egg albumin.

Enter allergy to egg albumin

Test Objectives:

Supporting data for: Modify Antigen Recommendations Based on Allergy History:
The system notifies the provider of any conflicts between recommended vaccines in the updated forecast and the patient's active allergies.

Test Case	Juan Marcel Gonzales Initial Data Load		
Description:	Description:		
11	The practice site for the scenario is Shoreline Pediatrics. The EHR vendor loads demographic data and clinical history for Juan Macel Gonzales. The data includes a clinical history of Asthma.		
	Test Steps		
	Description: The EHR vendor loads demographic data for Juan Marcel Gonzales.		
Enter Initial Demographic Data for New Patient Juan Marcel Gonzales	Test Objectives: *Register New Patients: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.		
Enter Clinical History for Juan Marcel Gonzales	Description: The clinical history of Moderate Persistent Asthma is documented in the record created for Juan Marcel Gonzales. Test Objectives: Supporting data for testing contraindications.		

Description:

The practice site for the scenario is Shoreline Pediatrics. The EHR vendor loads demographic data and clinical history for twin Mariela Gonzales Morales.

Test Steps

Description:

The EHR vendor loads demographic data for Mariela Gonzales Morales.

Enter Initial Data for Mariela **Gonzales Morales**

Test Objectives:

Demographic Register New Patients: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

Test Case

Juana Maria Gonzales Morales Initial Data Load

Description:

The practice site for the scenario is Shoreline Pediatrics. The EHR vendor loads demographic data and clinical history for twin Juana Maria Gonzales Morales.

Test Steps

Description:

The EHR vendor loads demographic data for Juana Maria Gonzales Morales.

Enter Initial Data for Juana Maria Gonzales **Morales**

Test Objectives:

Demographic $\|_{Register\ New\ Patients}$: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

Test Case Group: Juana Mariana Gonzales Visit

No Description

Test Case	Query the Registry for Juana Mariana Gonzales

Description:

The EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Mariana Gonzales.

Querying the registry will consist of the vendor creating Z44 messages for Juana Mariana Gonzales to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.

Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.

Test Steps

Description:

Juana Mariana Gonzales is selected as the patient and her record is opened in the EMR.

Select Patient Juana Mariana Gonzales

Test Objectives:

Select New Patient: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

Description:

The provider uses the EMR to query the Immunization Registry for an Evaluated History and Forecast based on information known to the Immunization Registry.

Query Registry for vaccination history and forecast for Juana

Test Objectives:

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without

Mariana Gonzales

scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Description:

The Immunization Registry returns an Evaluated History and Forecast (Z42) to the EMR in response to the query for patient (Juana Mariana Gonzales). The provider reviews the immunization history from the registry and compares to the immunization history in the EMR. The provider reconciles the information from these sources, importing information known only to the registry, retaining information that is more accurately reflected in the local EMR:

The physician accesses the record for Juana Mariana Gonzales and:

- Reconciles the EHR vaccine history with the history retrieved from the registry:
- o Accepts new vaccines from the registry data

o If the EHR does not already flag the first MMRV as invalid, the provider updates the first MMRV to indicate it is "invalid" as it was given too early (as notified by the registry) o Retains the local history for influenza and polio vaccines that are not included in the registry report.

View and
Compare
response to
request for
vaccination
history for
Juana
Mariana
Gonzales

Test Objectives:

Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History: The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

Review Patient Immunization History: To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.).

Description:

If the EHR does not already flag the first MMRV as invalid, the provider updates the first MMRV to indicate it is "invalid" as it was given too early (as notified by the registry)

Mark first MMR Dose as Invalid

Test Objectives:

dose validity is an important aspect of:

Record Past Immunizations: The EHR or other clinical software system allows providers

	to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.
View the vaccination forecast for Juana Mariana Gonzales	Description: The physician accesses the record for Juana Mariana Gonzales and: • Displays the registry forecast which includes the need for a second, valid MMRV vaccine and also the need for influenza and polio vaccines (since the registry has no information about them) Test Objectives:
	View Immunization Forecast: The system provides a view of the immunization forecast provided by the public health immunization registry (IIS). The display includes the forecast from the registry and includes recommended vaccination dates, minimum (earliest) date, ideal date, and maximum (latest) date for each vaccine included in the forecast.
and import vaccinations from Evaluated History and Forecast for Juana Mariana	Description: Juana Maria Gonzales Morales immunization registry provided Evaluated History and Forecast is reconciled with the Immunization history information in the EMR.
	Test Objectives: Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.
Juana Mariana	Description: Once the vaccine history is reconciled in the EMR, the vaccine forecast is updated. Test Objectives:
	View Reconciled Immunization Forecast: The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

Test Case	Juana Mariana Gonzales, Enter Orders and Immunizations
Description:	
	at of ordering vaccines for the test patients, reviewing any alerts caused by specific scenarios, and nations administered to the patients.
	Test Steps
Order IPV and view prior reaction	Description: The physician accesses the record for Juana Mariana Gonzales and:
	Test Objectives: Notify of Previous Adverse Event: EHRs and other clinical software systems alert
	providers to previous adverse events for a specific patient, in order to inform clinical decision-making when providers view an existing immunization record.
IPV Parental Refusal	Description: The mother is concerned about administering the IPV due to the prior adverse reaction, and refuses to have the child immunized for IPV. The provider documents mother's refusal for IPV vaccine indicating the parent decision, the reason and makes it permanent.
	Test Objectives: Record Vaccine Administration Deferral: The EHR or other clinical software system allows a user to enter a reason or reasons why a specific immunization was not given to a patient (e.g., due to contraindication, refusal, etc.). The system also stores that information in a structured way so it can be reported and analyzed as needed.
Order Influenza vaccine and view allergy alert	Description: The provider orders inactivated influenza vaccine and is notified that the patient as allergy to egg albumin Test Objectives:
	Modify Antigen Recommendations Based on Allergy History: The system notifies the provider of any conflicts between recommended vaccines in the updated forecast and the patient's active allergies.
	Description:

Attempt to order	The provider attempts to give a Varicella dose, and is warned that it is too soon to give a live vaccine dose. Test Objectives: Receive Dose Not Indicated Alert for Single Vaccine Order: The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.
Records Influenza Vaccine administration route with data validation checking	Description: The nurse documents administration route for the nasal live, attenuated influenza vaccine Is prevented from documenting "IM" for live, attenuated influenza vaccine Test Objectives: Record Vaccine Administration: The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size. Sample of data quality checking for vaccine route.
Record Influenza Vaccine administration	Description: The nurse administers the the nasal live, attenuated influenza vaccine Documents all required information for each vaccine Test Objectives: Record Vaccine Administration: The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size.
Records MMRV Vaccine administration route with	Description: The nurse documents administration route for the MMRV vaccine • Is prevented from documenting "oral" for MMRV vaccine Test Objectives:

validation checking	Record Vaccine Administration: The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size. Sample of data quality checking for vaccine route.
	Description: The nurse administers the the MMRV vaccine • Documents all required information for each vaccine
Record MMRV Vaccine administration	Test Objectives: *Record Vaccine Administration: The EHR or other clinical software system records information about each vaccine administered. The EHR records this information

as structured data elements, including, at a minimum: date administered,

quantity of vaccine/dose size.

administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and

Test Case	Juana Mariana Gonzales Transmit Immunization Report	
Description: Following the vaccinations given during the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The Vaccination report includes all newly administered vaccines. The report should include vaccines incorrectly recorded in the IIS. The report MAY send the immunizations that the EMR imported from the IIS.		
	Test Steps	
Transmit the immunization report to the Immunization Registry	Description: Following the vaccinations given during the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The Vaccination report includes all newly administered vaccines. The report should include vaccines incorrectly recorded in the IIS. The report MAY send the immunizations that the EMR imported from the IIS. Test Objectives: Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.	

	Description:
Receive ACK Z23 from Immunization Registry	The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.
	Test Objectives:
	No Test Objectives
	Description:
	Following the vaccine administration, the patient's mother reports that the patient that evening had persistent, inconsolable crying lasting > 3 hours.
Record an adverse reaction	
	Test Objectives:
	Identify Adverse Event: The EHR or other clinical software system enables capture of structured data regarding adverse events.
Transmit the updated vaccination report with adverse reaction to the registry	Description:
	The adverse reaction to the MMRV of persistent, inconsolable crying lasting > 3 hours within 48 hours of dose is reported to the Immunization Registry using a Z22/VXU message.
	Test Objectives:
	Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
Receive ACK	Description:
Z23 from Immunization Registry for Updated Transmission	The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.
	Test Objectives:
	No Test Objectives

Test Case	Juana Mariana Gonzales Display Immunization Report		
Description:	Description:		
	isit, the provider uses the EMR to produce an immunization report for the (the report can be provided in various formats - e.g., print, send to patient		
Test Steps			

Produce an immunization report for Juana Mariana Gonzales including all history

Description:

Following the vaccination visit, the provider uses the EMR to produce an immunization report for the patient including all history (the report can be provided in various formats - e.g., print, send to patient portal, etc.)

Test Objectives:

Produce Standard Patient Immunization History Report: The EHR or other clinical software system produces a report of a patient's immunization history that is appropriate for various entities, such as schools and day-care centers.

Test Case Group: Juan Marcel Gonzales Visit

No Description

Test Case	Query the Registry for Juan Marcel Gonzales

Description:

The EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juan Marcel Gonzales. Querying the registry will consist of the vendor creating Z44 messages for Juan Marcel Gonzales to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.

Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.

Test Steps

Description:

Juan Marcel Gonzales is selected as the patient and his record is opened in the EMR.

Test Objectives:

Select Patient Juan Marcel Gonzales

Select New Patient: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external

	systems such as an immunization registry.
Query Registry for vaccination history and forecast for Juan Marcel Gonzales	Description: The provider uses the EMR to query the Immunization Registry for an Evaluated History and Forecast based on information known to the Immunization Registry. Test Objectives: Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).
View and import response to request for vaccination history for Juan Marcel Gonzales	Description: The physician accesses the record for Juan Marcel Gonzales and: * Accepts the vaccines provided by the registry as this is a new patient and there are no prior vaccines recorded * Views the registry history including the second dose of Hepatitis B vaccine given late (at 2 years of age) and no history of a third dose; influenza vaccine was also not given since 2013 Test Objectives: *Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.
View the vaccination forecast for Juan Marcel Gonzales returned by the	Description: The physician accesses the record for Juan Marcel Gonzales and: • Views the vaccine forecast provided by the Immunization Registry Test Objectives: View Immunization Forecast: The system provides a view of the immunization

Registry	forecast provided by the public health immunization registry (IIS). The display includes the forecast from the registry and includes recommended vaccination dates, minimum (earliest) date, ideal date, and maximum (latest) date for each vaccine included in the forecast.
View the vaccination forecast for Juan Marcel Gonzales	Description: The physician accesses the record for Juan Marcel Gonzales and, once the vaccine history is reconciled in the EMR, the vaccine forecast is updated: • The provider views the updated vaccine forecast (either as provided by the Immunization Registry or as determined through EMR defined methods) Test Objectives: View Reconciled Immunization Forecast: The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

Test Case	Juan Marcel Gonzales, Enter Orders and Immunizations		
Description:	Description:		
	of ordering vaccines for the test patients, reviewing any alerts caused by specific scenarios, and ions administered to the patients.		
	Test Steps		
	Description: The physician accesses the record for Juan Marcel Gonzales and:		
	• Orders administration of Influenza vaccine (intranasal, live virus vaccine)		
Order intranasal, live virus influenza	Receives notification the patient has asthma, a relative contraindication for intranasal influenza vaccine		
vaccine and view asthma	Test Objectives:		
contraindication	Modify Antigen Recommendations Based on Active Diagnoses: The system notifies the provider of any conflicts between recommended vaccines in the updated forecast and the patient's current or historical diagnoses.		
	Enter Vaccination Order: The EHR or other clinical software system allows providers to order immunizations for a patient using filters for type of vaccine, including combination vaccines.		

	Description:
Orders administration	As indicated by the vaccine forecast, the third Hepatitis B is overdue, and is ordered.
of Hepatitis B vaccine	Test Objectives:
	Enter Vaccination Order: The EHR or other clinical software system allows providers to order immunizations for a patient using filters for type of vaccine, including combination vaccines.
	Description:
	The fifth DTaP is ordered, and the provider is notified that the dose is too early.
Orders administration	Test Objectives:
of DTaP vaccine and alerted that the dose is too	Receive Dose Not Indicated Alert for Single Vaccine Order: The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.
	Enter Vaccination Order: The EHR or other clinical software system allows providers to order immunizations for a patient using filters for type of vaccine, including combination vaccines.
	Description:
Records Hepatitis B Vaccine lot	The nurse documents administration lot number for the Hepatitis B vaccine Is prevented from ordering the Hepatitis B lot as it has expired Documents administration from a different lot that is not expired
number with expired lot alert	Test Objectives:
	Notify of Vaccine Dose Expiration: The EHR or other clinical software system notifies the provider administering a vaccine if the dose chosen for administration is expired.
	Description:
	The nurse administers the the Hepatitis B vaccine • Documents all required information for the vaccine
Record Hepatitis B Vaccine	Test Objectives:

administration	Record Vaccine Administration: The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size.
Records Influenza Vaccine	Description: The nurse documents administration for the inactivated influenza vaccine from a VFC source • Is alerted that the patient is not eligible for VFC • Orders a different non-VFC lot of inactivated influenza vaccine
Vaccine administration with VFC eligibility checking	Test Objectives: Notify of Vaccine Dose Ineligibility: The EHR or other clinical software system provides a method for alerting a provider if a vaccine is selected for a patient who is not eligible for the inventory item selected.
Record Influenza Vaccine administration for Juan Marcel Gonzales	Description: The nurse administers the inactivated influenza vaccine • Documents all required information for each vaccine Test Objectives: Record Vaccine Administration: The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size.

Test Case	Juan Marcel Gonzales Transmit Immunization Report		
Description:	Description:		
the VXU/Z22. The Vac	Following the vaccinations given during the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The Vaccination report includes all newly administered vaccines. The report should include vaccines incorrectly recorded in the IIS. The report MAY send the immunizations that the EMR imported from the IIS.		
	Test Steps		
	Description: Following the vaccinations given during the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The Vaccination report includes all newly administered vaccines. The report MAY send the immunizations that the EMR imported from the IIS.		

Marcel Gonzales	Test Objectives: Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries. The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.
-----------------	---

Receive ACK Z23 from

Immunization Registry

Description:

The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

Test Objectives:

No Test Objectives

Test Case	Juan Marcel Gonzales Display Immunization Report	
Description: Following the vaccination visit, the provider uses the EMR to produce an immunization report for the patient including all history (the report can be provided in various formats - e.g., print, send to patient		
portal, etc.)		
	Test Steps

Test Case Group: Mariela Gonzales Morales Visit

No Description

Test Case	Query the Registry for Mariela Gonzales Morales

Description:

The EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Mariela Gonzales Morales. Querying the registry will consist of the vendor creating Z44 messages for Mariela Gonzales Morales to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.

Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.

Test Steps

Description:

Mariela Gonzales Morales is selected as the patient and her record is opened in the EMR.

Select Patient Mariela Gonzales Morales

Test Objectives:

Select New Patient: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

Description:

The provider uses the EMR to query the Immunization Registry for an Evaluated History and Forecast based on information known to the Immunization Registry.

Query Registry for vaccination history and forecast for Mariela Gonzales Morales

Test Objectives:

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Description:

returned by the Immunization Registry	View Immunization Forecast: The system provides a view of the immunization forecast provided by the public health immunization registry (IIS). The display includes the forecast from the registry and includes recommended vaccination dates, minimum (earliest) date, ideal date, and maximum (latest) date for each vaccine included in the forecast.
	Description:
View the vaccination forecast for Mariela Gonzales Morales	The physician accesses the record for Mariela Gonzales Morales and:
	 Views the vaccine forecast (either as provided by the Immunization Registry or as determined through EMR defined methods)
	Test Objectives:
	View Reconciled Immunization Forecast: The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

Test Case	Mariela Gonzales Morales, Enter Orders and Immunizations

Description:

This test will consist of ordering vaccines for the test patients, reviewing any alerts caused by specific scenarios, and documenting vaccinations administered to the patients.		
	Test Steps	
Enter Initial Clinical Information for Mariela	Description: The triage nurse enters basic information on Mariela Gonzales Morales – she has a fever (Temperature of 100.80 F).	
	Test Objectives: Supporting data for documenting contraindications (it could also trigger an alert as a locally configured alert rule): <i>Modify Antigen Recommendations Based on Active Diagnoses:</i> The system notifies the provider of any conflicts between recommended vaccines in the updated forecast and the patient's current or historical diagnoses.	
deferral for the vaccines due	Description: The physician accesses the record for Mariela Gonzales Morales and: • Enters a deferral for the vaccines due (Hepatitis B, DTaP, Hib, Pneumococcal conjugate (PCV13) and Rotavirus) due to medical reason, indicating low grade fever, and defers for 1 month	
	Test Objectives: Record Vaccine Administration Deferral: The EHR or other clinical software system allows a user to enter a reason or reasons why a specific immunization was not given to a patient (e.g., due to contraindication, refusal, etc.). The system also stores that information in a structured way so it can be reported and analyzed as needed.	

Test Case	Mariela Gonzales Morales Transmit Immunization Report		
Description:			
the VXU/Z22. The Vaccin	s given during the visit, the EMR transmits an Immunization report to the Immunization Registry using ation report includes all newly administered vaccines. The report should include vaccines incorrectly port MAY send the immunizations that the EMR imported from the IIS.		
	Test Steps		
Description: Following the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The Vaccination report includes the vaccine deferrals. The report MAY send the immunizations that the EMI imported from the IIS. Report for Mariela			

Gonzales Morales	Test Objectives:
	Transmit Standard Patient Immunization History Report: The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
from Immunization Registry	Description: The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message. Test Objectives: No Test Objectives

Test Case	Mariana Gonzales Morales Display Immunization Report
Description:	
	isit, the provider uses the EMR to produce an immunization report for the (the report can be provided in various formats - e.g., print, send to patient
	Test Steps
Produce an immunization report for Mariela Gonzales Morales including all history	Description: Following the vaccination visit, the provider uses the EMR to produce an immunization report for the patient including all history (the report can be provided in various formats - e.g., print, send to patient portal, etc.) Test Objectives: Produce Standard Patient Immunization History Report: The EHR or other clinical software system produces a report of a patient's immunization history that is appropriate for various entities, such as schools and day-care centers.

Test Case Group: Juana Maria Gonzales Morales Visit

No Description

Test Case	Query the Registry for Juana Maria Gonzales Morales.	
Description:		

The EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Maria Gonzales Morales. Querying the registry will consist of the vendor creating Z44 messages for Juana Maria Gonzales Morales to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.

Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.

Test Steps

Description:

Juana Maria Gonzales Morales is selected as the patient and her record is opened in the EMR.

Select Patient Juana Maria Gonzales Morales

Test Objectives:

Select New Patient: The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

Description:

Query Registry for vaccination history and forecast for Juana Maria Gonzales Morales

The provider uses the EMR to query the Immunization Registry for an Evaluated History and Forecast based on information known to the Immunization Registry.

Test Objectives:

Real Time Request/Receive Patient Immunization History: The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Description:

The physician accesses the record for Juana Maria Gonzales Morales and:

View and import response to

• Accepts the single vaccine in the registry record into the EHR history

request for vaccination history for Juana Maria Gonzales Morales	Test Objectives: Request/Receive Patient Immunization Data and Identify Source: The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.
View the vaccination forecast for Juana Maria Gonzales Morales returned by the Immunization Registry	Description: The physician accesses the record for Juana Maria Gonzales Morales and: • Views the vaccine forecast provided by the Immunization Registry Test Objectives: View Immunization Forecast: The system provides a view of the immunization forecast provided by the public health immunization registry (IIS). The display includes the forecast from the registry and includes recommended vaccination dates, minimum (earliest) date, ideal date, and maximum (latest) date for each vaccine included in the forecast.
View the vaccination forecast for Juana Maria Gonzales Morales	Description: The physician accesses the record for Juana Maria Gonzales Morales and: • Views the vaccine forecast (either as provided by the Immunization Registry or as determined through EMR defined methods) Test Objectives: View Reconciled Immunization Forecast: The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

Test Case Group: Cohort Report

This test will consist of generating a cohort report to list all patients who are overdue for immunizations showing all overdue immunizations with the associated due/overdue dates.

Test Case	Overdue Immunizations

Description: The provider periodically uses the EMR to identify the cohort of patients that are overdue for immunizations along with their contact information in order to send reminder notifications to the

Test Steps Description: The provider periodically uses the EMR to identify the cohort of patients that are overdue for immunizations along with their contact information in order to send reminder notifications to the patients/parents.

Produce Overdue Immunizations Cohort Report

Test Objectives:

Produce Population-Level Report: The EHR or other clinical system generates aggregate, population-level reports based on known patient immunization data.
