Description

A female toddler, Donna Victoria Bee, is brought to the local clinic to determine what immunizations have been given and what immunizations are needed. A clinic staff member collects basic patient demographic information including name, date of birth, sex, and birth order (Donna was born 3rd in a triplet). A clinic provider uses this information to locate the patient's medical record. The staff member then uses the medical record and system capabilities to query the IIS to request an evaluated history and forecast for the patient.

Comments

Most of the test data is categorized as Test Case Fixed. It is important that the data is entered into the querying system as specified to enable linking the response message to the patient record.
The sending (querying) system will need to accept a response indicating that no matches were found.

Pre Condition

Person exists in the system with the complete demographics as provided in the Test Data Specification.
Person has Medical Record Number (MR).
Person does not have a record in the IIS, even though complete demographics are used in the query.

Post Condition

A response message is returned in which no person record is found.

Test Objectives

Tests for a maximally valued query message, including use of OIDs, mother's maiden name, fully valued address, birth indicator and birth order.

Evaluation Criteria

Message Validation Report

Notes for Testers
