Description

If the EHR does not already flag the first MMR as invalid, the provider updates the first MMR to indicate it is "invalid" as it was given too early (as notified by the registry). The next MMR is entered as given 14 days prior to the test date.

Pre Condition

Initial Data Load

Step 2: Enter Initial Immunization Data for Juana Mariana Gonzales: Immunizations from practice

Post Condition

MMR status for the first MMR dose is set to invalid.

Test Objectives

Dose validity is an important aspect of:

Record Past Immunizations: The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.

Evaluation Criteria

Evaluation Criteria: The vendor is able to record that the first MMR vaccination dose is invalid with a reason that it was given too early, and therefore the dose administered on 11/22/2012 should indicated dose '1', and the dose administered two weeks prior to the current visit should indicate dose '2'.
